Small-size portable biopotential amplifier with a no code setup for non-invasive EMG recording!

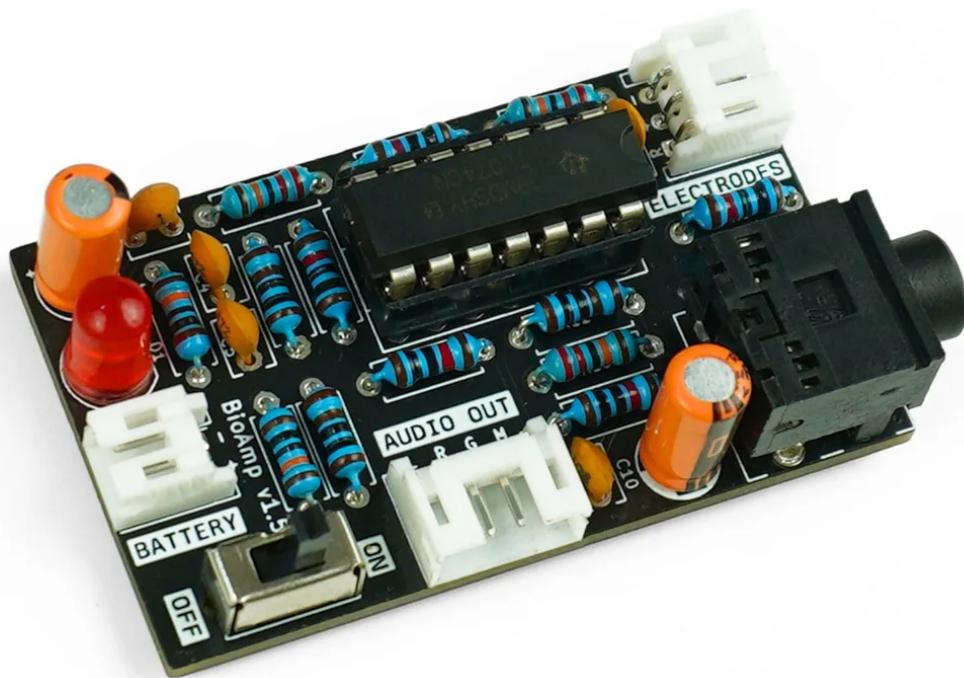

---

**CHAPTER  
ONE**

---

**OVERVIEW**

It is a small size portable biopotential amplifier with a no code setup to record and listen to your muscle signals (EMG) non invasively. The best part is that it doesn't require any microcontroller (like Arduino) to sample the signal. You just plug a 9V battery into the board, electrodes to the body, and an audio jack to a mobile/laptop, and you are ready to record signals from muscles (EMG) using audacity or Backyard Brain's spike recorder app.

---

**CHAPTER  
TWO**

---

## **FEATURES & SPECIFICATIONS**

Minimum Input Voltage	7-9 V
Input Impedance	10^7 ohm
Fixed Gain	~200x
BioPotentials	EMG (Electromyography)
No. of channels	1
Electrodes	3 (Positive, Negative, and Reference)
Dimensions	5.0 x 3.0 cm
Open Source	Hardware + Software

---

FOUR

---

## ASSEMBLING THE KIT

You can get your own Bioamp v1.5 bag of parts from [our store](#) or [Tindie](#) or the step by step guide below.

Fig. 1: Step 1 - Bare Board

Fig. 2: Step 2 - 100K Resistors

Fig. 3: Step 3 - 2.2K Resistor

Fig. 4: Step 4 - 1K Resistors

Fig. 5: Step 5 - 220K Resistors

Fig. 6: Step 6 - 10K Resistors

Fig. 7: Step 7 - 100nF Capacitors

Fig. 8: Step 8 - 1nF Capacitors

Fig. 9: Step 9 - JST PH Connectors

Fig. 10: Step 10 - IC Socket

Fig. 11: Step 11 - IC

Fig. 12: Step 12 - Power LED

Fig. 13: Step 13 - 47uF Capacitors

Fig. 14: Step 14 - Switch

Fig. 15: Step 15 - Headphone jack

# CHAPTER FIVE

# CONNECTIONS

To measure the EMG signals, just connect BioAmp Cable v3 with the hardware as shown in the image below, and get started.
