Small-size portable biopotential amplifier with a no code setup for non-invasive EMG recording!

**CHAPTER
ONE**

OVERVIEW

It is a small size portable biopotential amplifier with a no code setup to record and listen to your muscle signals (EMG) non invasively. The best part is that it doesn't require any microcontroller (like Arduino) to sample the signal. You just plug a 9V battery into the board, electrodes to the body, and an audio jack to a mobile/laptop, and you are ready to record signals from muscles (EMG) using audacity or Backyard Brain's spike recorder app.

**CHAPTER
TWO**

FEATURES & SPECIFICATIONS

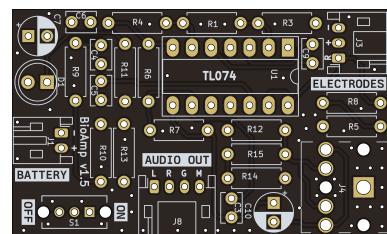

Minimum Input Voltage	7-9 V
Input Impedance	10^7 ohm
Fixed Gain	~200x
BioPotentials	EMG (Electromyography)
No. of channels	1
Electrodes	3 (Positive, Negative, and Reference)
Dimensions	5.0 x 3.0 cm
Open Source	Hardware + Software

CHAPTER THREE

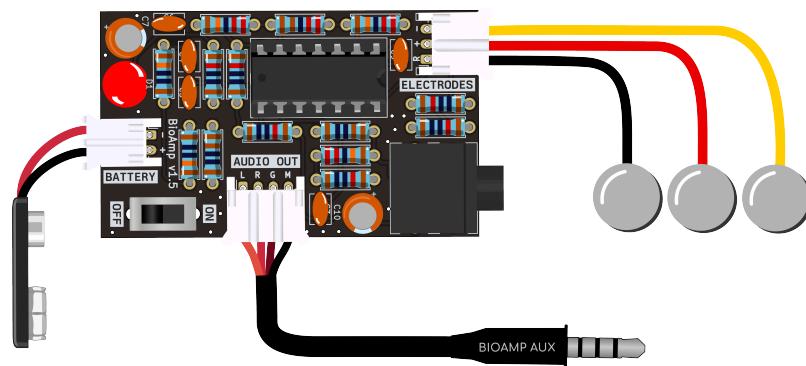

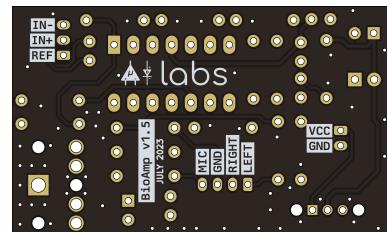

HARDWARE

Images below shows a quick overview of the hardware design.

CHAPTER
FOUR

ASSEMBLING THE KIT

You can get your own Bioamp v1.5 bag of parts from [our store](#) or [Tindie](#) or the step by step guide below.

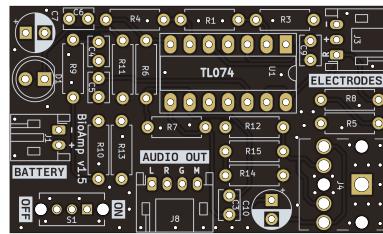

Fig. 1: Step 1 - Bare Board

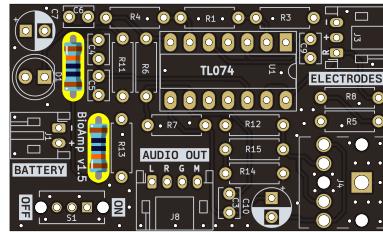

Fig. 2: Step 2 - 100K Resistors

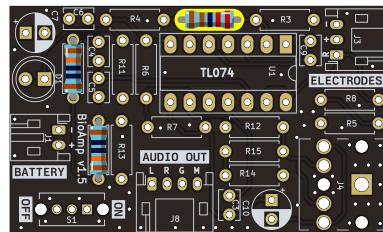

Fig. 3: Step 3 - 2.2K Resistor

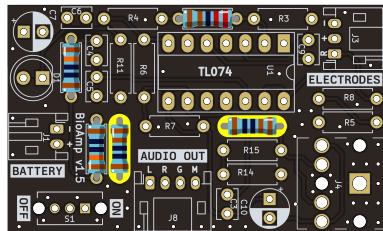

Fig. 4: Step 4 - 1K Resistors

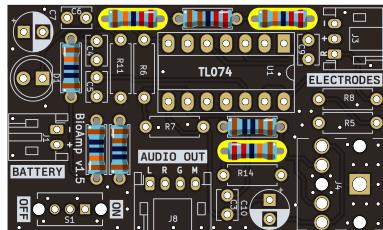

Fig. 5: Step 5 - 220K Resistors

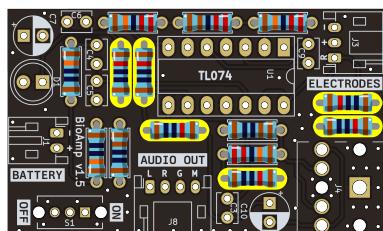

Fig. 6: Step 6 - 10K Resistors

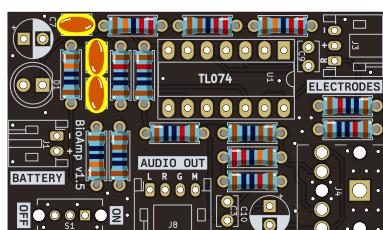

Fig. 7: Step 7 - 100nF Capacitors

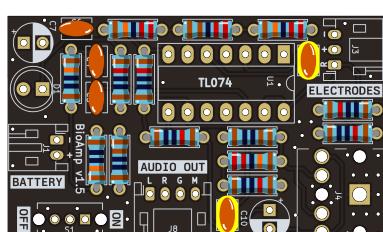

Fig. 8: Step 8 - 1nF Capacitors

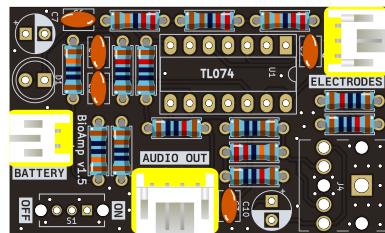

Fig. 9: Step 9 - JST PH Connectors

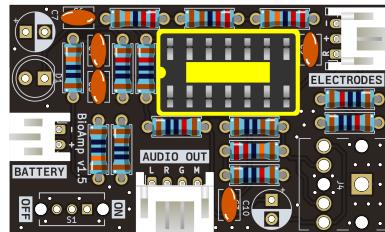

Fig. 10: Step 10 - IC Socket

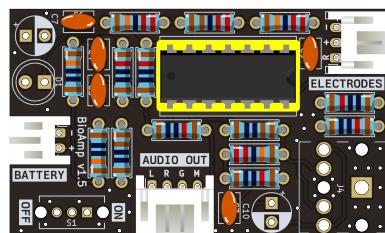

Fig. 11: Step 11 - IC

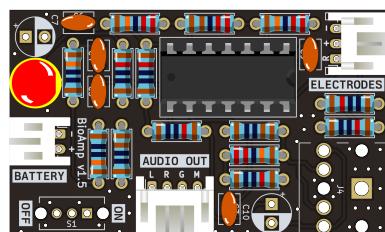

Fig. 12: Step 12 - Power LED

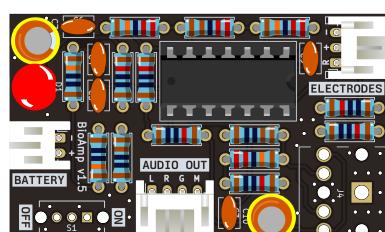

Fig. 13: Step 13 - 47uF Capacitors

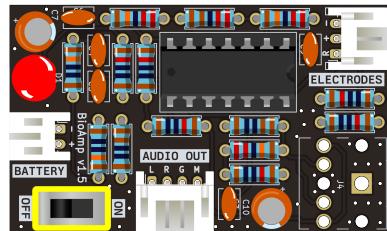

Fig. 14: Step 14 - Switch

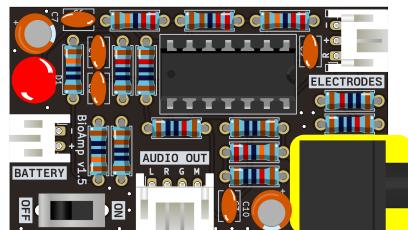

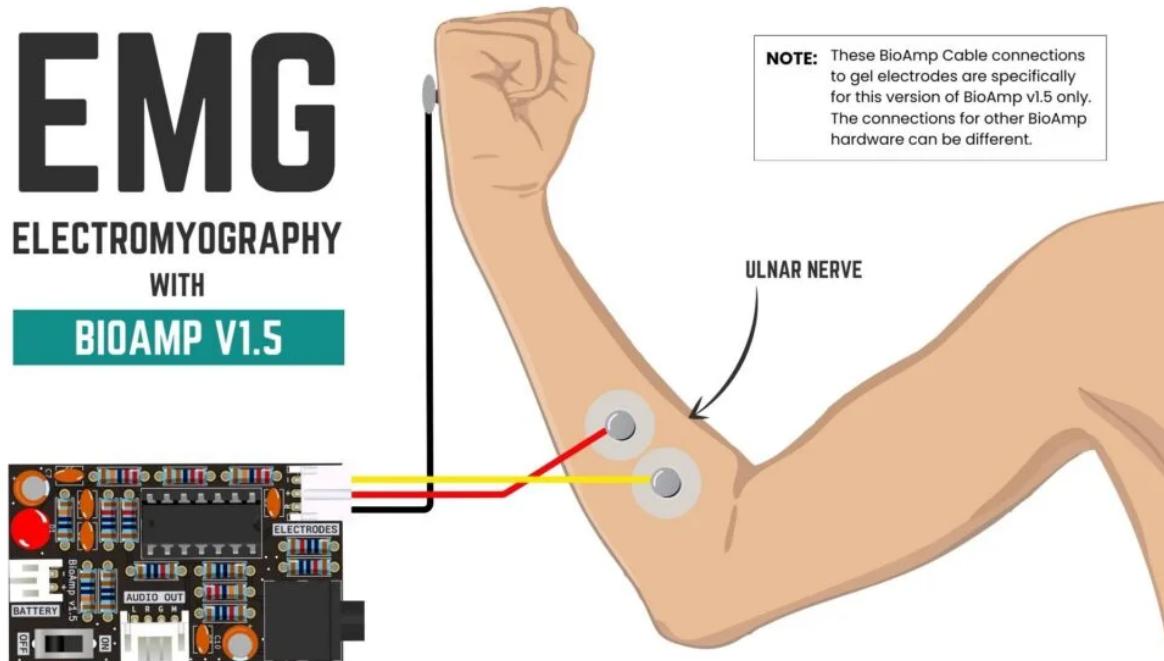

Fig. 15: Step 15 - Headphone jack

CONNECTIONS

To measure the EMG signals, just connect BioAmp Cable v3 with the hardware as shown in the image below, and get started.
